

Cold Chain Logistics

Preserving and protecting your products while reducing environmental impact.

In response to the fast growing pharmaceutical and biological markets, Lynden is introducing the Credo Cube® Thermal packaging, designed for consistent temperature stability between 2-8°C for up to 96 hours. The Credo Cube® has been validated under Canadian extreme temperature conditions. These containers are reusable and 100% recyclable at end of useful life.

Lynden has partnered with a carrier for the reverse logistics, cleaning and sanitization process of the Credo Cube®. Our validated conditioning process for the thermal plates ensures 96 hours of shipper effectiveness.

Our innovative and customized cold chain solution is in conformance to Health Canada GUI-0069 Guidelines for temperature control of drug products during storage and transportation.

We have introduced three sizes of the Credo® Thermal packaging solutions for modularity and simple preparation and pack-outs. The Credo Cube® is one of several temperature control packaging solutions available at Lynden.
