

*Heavy Construction Specializing in  
Remote-Site Projects*

*Knik Construction has the equipment, personnel and experience for construction projects in some of the most challenging environments.*

## Building in Remote Locations

Knik's experience includes heavy construction, road building, asphalt paving, foamed asphalt treated bases, airport construction and reconstruction, excavation, dredging, breakwater construction, crushing and transportation of gravel products.

## Capable of Reaching Far-Off Places

Each year, Knik transports over 100,000 tons of aggregate material by tug and barge to remote sites in Western Alaska and other parts of the world. Our fleet of ocean-going and shallow-draft tugs, barges and landing craft offers effective materials and equipment transport to most any maritime destination, while our low-ground-pressure, off-road vehicles are engineered to carry heavy loads across sensitive environments without causing damage.

## Mobilizations and Logistics Expertise

Knik has developed a particular strength – a niche and main focus – in conducting jobs that require mobilization by barge and logistical management techniques. These strengths have served a base that includes government and private sector organizations throughout Alaska, the South Pacific, and Caribbean.

*“No matter how complex the logistics, or rugged the terrain... Whether it's harsh conditions or remote locations... We have the people and the tools to solve the most difficult construction challenges.”*

## Features

## Benefits

### Contractor Licensing

Knik had been licensed in Alaska since 1973 and in Hawaii since 1991 and is also a licensed Guam contractor.

### Lynden Family of Companies

Because Knik is part of the Lynden family of companies, we have access to Lynden's combined capabilities to assist remote site accessibility. Trucks, barges, L-382 Hercules Aircraft, as well as logistical services.

### Quality Control Labs

Knik has five remote site quality control labs. These labs and a company QC inspector are standard procedure on all of our crushing and asphalt operations. This allows us to ensure we are producing material to the highest quality possible at all our remote locations.

### Remote Site Crushing

Knik owns and operates three portable crushing systems each capable of producing at least 400 tons per hour of crushed aggregate. These systems have been built to move quickly and easily to remote site quarries and gravel sources throughout Alaska and Guantanamo Bay, Cuba. These sources are operated to produce crushed base course, asphalt aggregate and riprap for various road, airport and harbor projects throughout Alaska and Guantanamo Bay.

### Asphalt Shipping Capabilities

Knik operates five portable state of the art Astec asphalt plants. These plants operate in remote locations that require asphalt cement to be shipped in cold and reheated for use. Knik has the unique ability to ship asphalt cement in specially designed shipping containers constructed with built-in heating systems. These containers make it possible to transfer asphalt cement in a way that is less harmful to the environment. Not only are these containers reusable but they transfer the hot asphalt from tank to plant without a drop of cement hitting the ground, contrast this to the mess and disposal problems that barrels cause and it's clear why this is a much more ecological friendly way of shipping asphalt cement.

### Experienced Management

Knik features a management team that is dedicated to making sure every project is completed to safe specifications and on time. All of Knik's managers have learned construction from the "ground up." Our team of highly motivated managers takes every project from the bid stage to final project acceptance. Through experience we have learned communication between the owner, the community, and us is key to creating a successful project.

### Quality People

While we're proud of our modern equipment, we believe the quality of a business is determined by the quality of its people. Knik strives to hire and keep the best. We are committed to a safe, drug-free working environment. All employees are part of a random drug-testing program.
