

## **OIL & GAS SOLUTIONS**

### **Client Requirements**

Procure complete transportation and logistics services in support of a world-class oil development project.

### **Solution**

Lynden assessed current and future project requirements, resulting in critically important site selection. Lynden employees were also imbedded onsite to work hand-in-hand with key client personnel.

### **Results**

98% and above conformance to client KPI's and no lost-time accidents.

Companies operating within the challenging oil and gas sector rely on logistics providers with years of industry experience and the ability to tackle complicated supply chain needs. Lynden Logistics understands the unique nature of this business and has the expertise, infrastructure and personnel to handle our oil and gas industry customers' most complex requirements. One of our clients, whose work supports a world-class oil development project, selected Lynden to provide all logistics and transportation services for construction of a large refinery in Canada.

As the project's primary transportation and logistics provider, Lynden coordinates, receives, and consolidates air, ocean and surface shipments of equipment and oil field materials from all over the world at a construction staging area (CSA). From the CSA, we then ship and manage the flow of materials to construction sites 400 kilometers away. Before the work commenced, Lynden's project team consulted closely with our client to accurately identify a suitable warehousing option, which resulted in selection of a facility with twice the capacity as what was originally planned. This space, ultimately, was the correct choice and ensured adequate support of current volume while also accounting for future growth.

The project also involved imbedding two Lynden employees at our client's facility as part of the overall logistics plan. These employees maintain daily interaction with our client's key logistics personnel, ensuring the project runs smoothly and helping foster a true partnership between our organizations.

Since the project commenced, Lynden has achieved 98 to 99 percent performance on all client Key Performance Indicators (KPI) and passed 25,000 service hours without a single lost-time accident.
