

Construction Shipping Solutions

Expert service from start to finish

LYNDEN
Innovative Transportation Solutions

Lynden delivers a competitive advantage to Alaska

From source to site, Lynden moves your construction supplies with the speed and cost that best matches your project's timeline.

Lynden understands that construction is a competitive industry that requires highly efficient transportation of all supplies, especially complex building packages for assembly in Alaska. We also understand that it requires careful coordination so that the specific pieces are delivered to the job site as they are needed.

Why Lynden

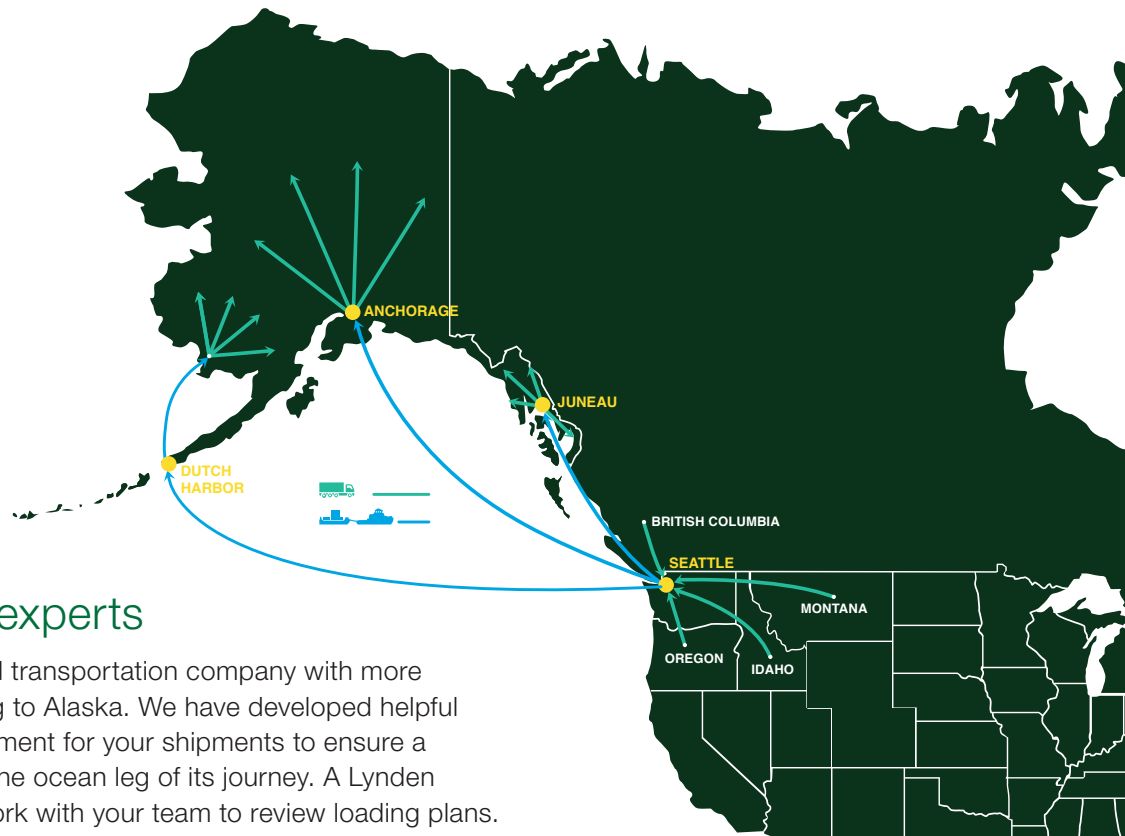

Lynden has geared its services to fully take advantage of the trucking payloads available in the Pacific Northwest and Alaska. What that means to you is we can offer source-to-site 53' flatbed and van service with payloads in excess of 60,000 pounds without the cost and risk of transferring loads. With Lynden you only ship two loads compared to other shipping methods and sourcing regions such as California where it would require three loads. Using Lynden means you will have fewer loads and no transfers, which ensures the erector knows where each piece is and the assurance that the materials are in the same order and condition as when the supplier loaded them. As a result, the project goes smoothly with no logistical delays. Lynden offers flexible terms with the ability to offer source-to-site, and Seattle-to-site pricing to best fit your terms with your supplier or customer.

Multi-modal shipping experts

Lynden is a multi-modal asset-based transportation company with more than 60 years of experience shipping to Alaska. We have developed helpful guidelines on packaging and securement for your shipments to ensure a safe and damage-free journey over the ocean leg of its journey. A Lynden representative would be happy to work with your team to review loading plans.
