# Heavy Haul Logistics

## Solutions for your most challenging oversized loads

At Lynden, no load is too wide, too tall or too heavy. Handling oversized and overweight freight is our specialty, and we take pride in coming up with cost-effective and creative ways to deliver it. The combined expertise of more than 15 transportation and logistics companies gives us the capability to handle the most complicated, difficult projects for our customers.

## Getting it there

We have a longstanding reputation and experience with heavy haul shipments to, from and within Alaska. We use that experience to offer our global customers safe, dependable and cost-effective services. Our diverse inventory of specialized equipment and dedicated staff give us an advantage over other transportation companies. With the combination of in-house marine options and specially designed equipment, including a Scheuerle trailer to carry 100-ton payloads, we can handle the heaviest project shipments. We're used to operating in harsh climates and remote locations to serve our oilfield, construction, mining and manufacturing customers. By land or sea, we'll do the heavy lifting for you.

## Experience

Our skilled drivers and operators have years of experience delivering heavy equipment and cargo. We know the ins and outs of getting the biggest loads across bridges, narrow roadways or sensitive areas. We'll obtain the necessary permits and check the route for overhead obstacles, weight limits and other issues ahead of time so you don't have to worry. With a variety of specialized equipment to choose from, we've got what you need to move freight of any dimension. Our barges even have a removable fence system on deck to accommodate bulk cargo. We are always up for a new challenge.

## The Lynden Difference

- ▶ Through years of experience, Lynden has developed partnerships with a number of leading heavy haul carriers, a reliable network for water service beyond Seattle, and a wide array of company equipment within Alaska to serve customers. The result is the ability to provide door-to-door shipping arrangements for large projects or single heavy haul transports with extended capabilities for specialized requirements.
- ▶ Weekly barge service allows Lynden to maintain control of heavy haul or project shipments beyond Seattle and to provide a customized set of logistics to customers, whether it is a single shipment or a large project. Options for delivery in Valdez, Whittier, or direct to Anchorage are available based on customer need, time of year, and final destination.
- ▶ Seamless logistics for project and heavy haul shipments from origin to destination, both domestic and international. We solve the problems, handle all the details and take the stress off the customer.
- ▶ For remote locations, Lynden's Hercules Aircraft can also move materials and supplies for construction, oil and mining projects. We provide simplified loading operations for quick turnarounds, direct loading from ground or truck, drive-on/drive-off vehicle loading, and we make the most of cargo space by stacking full-height rectangular loads.
- ▶ Decades of experience with oilfield projects, including the transport of truck-sized modules from fabrication facilities in Alaska to the North Slope at Prudhoe Bay. We routinely carry heavy machinery, bridge girders, vehicles, cranes, construction materials and more.
- ▶ The option of multi-modal transportation for your projects – oversized shipments may be transferred from highway to marine and back to highway to cut costs or speed or slow your delivery.
- ▶ A wide variety of equipment configurations to support overweight and over-dimensional cargo.
- ▶ Quest for Quality award-winning customer service. Professional and experienced staff.
- ▶ Strategically positioned facilities in key locations.
- ▶ Licensed to carry hazardous materials and bulk chemicals.
- ▶ Operating authority throughout U.S. and Canada.
- ▶ Air, ocean, river, rail, highway and off-road transportation.
