

Specialized instruction for safety, emergency response and hazardous materials

The Lynden Training Center

Solutions to prepare your company and your people for any situation

Lynden Training Center graduates can be found from the oil fields of Prudhoe Bay, AK to the Port of Houston, TX. They are on the road safely transporting hazardous materials, on the ground suiting up as first responders to a chemical spill, or in the air, flying to a mine site to rescue trapped workers in a mine.

For more than 20 years, the Lynden Training Center in Fairbanks, AK has provided training to individuals, businesses and government employees all over Alaska and the Lower 48. Experienced Lynden instructors educate, train and prepare people from all industries to work safely, prevent accidents and to respond to disasters like chemical spills, train derailments and other emergencies. We provide professional development courses with classroom instruction followed by hands-on exercises and drills in simulated response situations.

With an increasing demand for employees trained in hazardous materials transportation, hazardous waste operations and emergency response, Lynden's programs will keep you compliant with all state and federal regulations and prepare your team for any situation.

Instructors

Collectively, Lynden Training Center instructors have over 180 years of experience including transportation, military, oil and gas, industrial, fire and emergency response. Their 'real world' knowledge includes serving as firefighters, on the front lines of the military and as members of first responder rescue teams all over the world.

Training Facilities & Exercises

We design and execute drills, tabletops and full-scale exercises to meet the National Preparedness for Response Exercise Program (NPREP) guidelines and your specific goals. An active railroad track with a variety of rolling stock, including a specially designed roll-over MC306 tanker built by Lynden, is configured to simulate roll overs and other training situations to provide true representation of a real-world incident. Intermodal tanks and other container training props round out the fleet of rolling stock.

Hazardous Materials Courses

- ▶ HazMat First Responder: Awareness
- ▶ HazMat First Responder: Operations

Services

- ▶ In addition to offering specific courses, the Lynden Training Center can help you build and maintain an effective safety and health program to reduce work-related injuries and incidents and identify your unique exposures for contingency and emergency planning.
- ▶ In 2015, we received accreditation from the State of Alaska Training and Education Bureau as the first third-party provider to offer State of Alaska hazardous materials training, a designation usually reserved for state agencies and fire departments. The accreditation includes ProBoard, IFSAC and Methods of Instruction (MOI) designations for national and international response training.
- ▶ Course offerings range from fork lift training to hazardous materials transportation, and include specific courses for rescue team personnel.
- ▶ We provide North Slope Training Cooperative (NSTC) training, a special curriculum developed by eight oil companies to certify employees to work on the North Slope at Prudhoe Bay.
- ▶ Our course materials meet or exceed emergency management, emergency response, environmental, safety and health laws, statutes, regulations and standards.
- ▶ We can design customized training courses and provide refresher courses for your team using your Emergency Response Plan or other materials. We will train your staff, mentor response teams and test your plans on-site if needed.
- ▶ Our team has provided “boots on the ground” support for training projects, fire safety audits, accident investigations, work site observations and other tasks. We will come to you!

“Taught by a professional with real experience that was able to tailor material to the experience of the class.”
